

## VIVOSTAT TO JOIN EIC ACCELERATOR PILOT

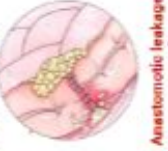

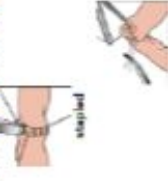

For more than 4 years, we at Vivostat® together with Revolution® have been working to develop and implement a new product that is focused on reducing anastomotic leakage in gastrointestinal surgery. This journey eventually led to the development of Obsidian ASG®, which combines a new intra-anastomotic application technique with the advantage of a product that both seals and provides growth factors to accelerate the healing process. After an initial observational trial, it is indicated that the use of Obsidian ASG® reduced leakage by more than 50%

### Obsidian Anastomotic SafeGuard

– A powerful and efficient tissue regeneration method

More than 4.8M patients will undergo surgical resection

Anastomotic leakage up to 13% of cases
